

## [AFIRE Sprint] Workshop 2 feedback+ homework

Dear AFIRE Sprint Attendees,

Great to move further along our journey in experimental evaluation of AI in grantmaking today! Particularly thanks to our case study presenters from La Caixa, SNSF and AQuAS and for everyone who listened and who asked questions.

As always, links to resources mentioned are in the [essential info slide deck](#) and replicated here <https://tomstafford.github.io/AIsprint/> (I update these as new information comes in, in particular I will add the links to the recordings when these are ready).

- **Your homework** is to apply the PICO framework introduced today to your experiment idea. Your assigned coach can help you with this exercise - they should be in touch shortly to arrange a meeting next week.
- Please complete the [Workshop 2 feedback survey](#). This provides feedback to us on what is most useful for you in these sessions, and also helps us matchmake groups with common interests (If you want to develop two ideas, please fill out the survey twice).
- Next time there is space in the schedule for **“lightning” experiment idea pitches** - these will help those who haven't done an experiment yet get feedback from the group. Please use the coaching session and the PICO homework to develop your plans and let us know in the feedback survey if you'd like to take one of the limited number of slots for this.
- The pre-session activity for workshop 3 is coming soon!
- **We're meeting all together next on 24th of June**, where we'll hear more about new experiment plans in those pitches, as well as a session from IGL's Teo Firpo on advocating for and communicating the value of experiments.

Any questions, please let me and the team know

Best wishes

Tom
